SUMMARY

Final-year Computer Science undergraduate specializing in Data Science, with hands-on experience building automated data pipelines and analytics solutions using Databricks, Azure, Snowflake and Power BI. Works across the modern data stack and enjoys learning new tools and improving skills through real-world work.

SKILLS

- **Languages**: Python, SQL, Java, C
- **Data/Cloud**: Azure Data Factory, Azure Databricks, Azure Synapse Analytics, ADLS Gen2, Snowflake, Delta Lake
- **Processing**: PySpark, Pandas, ETL/ELT, incremental loading
- **Tools**: Power BI, Git, GitHub

EDUCATION

BSc (Hons) in Computer Science, specializing in Data Science | Sep 2022 – 2026

- University of Kelaniya, Sri Lanka.
- Current GPA: 3.63/4.00.

PROJECTS

Weather & Air Quality Data Lakehouse | *Azure Data Factory, ADLS Gen2, Databricks, Azure SQL, Key Vault*

- Built a daily end-to-end lakehouse on Azure that joins weather (Open-Meteo) and air quality (OpenAQ v3) data for 3 cities, using a Bronze–Silver–Gold structure on ADLS Gen2.
- Built metadata-driven ADF pipelines (Lookup + ForEach, Azure SQL config table) and Databricks PySpark notebooks for cleaning, flattening and the Gold join.
- Added watermark-based incremental loading with stored procedures, so a failed run never loses or duplicates data. Stored the API key in Azure Key Vault.
- **GitHub** - https://github.com/BhasithaSan/azure-air-quality-lakehouse

Wikipedia Pageviews Lakehouse | *Azure Synapse Analytics, ADLS Gen2, PySpark, SQL, Power BI*

- Built a lakehouse on Azure Synapse that loads hourly English Wikipedia pageview files into Bronze–Silver–Gold layers on ADLS Gen2.
- Used Spark notebooks to clean the data and build a star schema and summary tables (top pages, desktop vs. mobile share, trending pages). Served them to a Power BI dashboard through serverless SQL views.
- Made pipelines safe to re-run with a skip-if-exists check, added a backfill pipeline for past days, and sent bad rows to a quarantine container.
- **GitHub** - https://github.com/BhasithaSan/wikipedia-pageviews-lakehouse

Airbnb Data Engineering & Analytics Pipeline | *Snowflake, SQL, Power BI*

- Built an end-to-end pipeline in Snowflake (Bronze–Silver–Gold) to ingest, clean, transform and model Inside Airbnb data for several cities.
- Modeled the Gold layer as a star schema, with city, neighbourhood, host, listing and date dimensions and fact tables.
- Built a Power BI dashboard on the Gold tables, KPI cards, and charts for income, month, bedroom count, property type, superhost status and rating.
- **GitHub** - https://github.com/BhasithaSan/air_bnb

PROFESSIONAL EXPERIENCE

Software Engineering Intern | Aug 2025 – Mar 2026

GlamerMedia

- Worked across the SDLC with React, React Native, NestJS and PostgreSQL.
- Participated in Agile stand-ups, tracked tasks in Jira, and used Git for version control.

ACHIEVEMENTS

Hackathons and Ideathons

- Finalist in HackVenture 1.0 (AIESEC University of Kelaniya).
- Finalist in GENESIZ'24 (Kotelawala Defence University).
- 3rd place in IEEE Innovation Nation Sri Lanka 2024 Colombo North competition.

Research

- Presented an abstract titled "AI-Based Grading Assistant for Evaluating Written Exam Papers" at the 4th Student Research Symposium of the Faculty of Computing and Technology, University of Kelaniya.

CERTIFICATIONS

- Snowflake badges for Data Warehousing Workshop, Data Lake Workshop, Data Engineering Workshop.
- Supervised Machine Learning: Regression and Classification - Coursera.
- Neural Networks and Deep Learning - Coursera.
- Advanced Learning Algorithms - Coursera.
